

# Year 2 Home Learning

## Topic & science

This half term our topic is 'Structures'. We will be looking at famous buildings around the world and particularly in London. We will also be thinking about the home and how people live around the world.

## Proper Project

Last half term we looked at the continents and how different species are adapted to living in the habitats and climates around the world. This half term we are going to be looking at homes and similarities and differences between homes in countries other than Britain.

Choose a continent and compare the homes you find there to your own home. How are the homes adapted to the climate? Write a factsheet about your findings.

## Let's talk...

Houses use up a lot of energy to keep warm and light, especially in the winter. Building designers are always looking for ways to make homes more efficient. How can we make our homes more efficient?

## Create 'n Make

London is full of iconic and world famous buildings. You could go for a walk in the city or take a virtual stroll on the internet. Choose a building and have a go at making a model of it. There are of course many buildings around the world that you may prefer to choose.

## Espanol

We have been practising saying our birthdays in Spanish. Have a go with your family and friends. Ask the question: ¿Cuándo es tu cumpleaños?

Answer: El \_\_\_ de \_\_\_\_\_

## Out and about...

Go for a walk around the local area and compare the buildings that you find.

The Geffrye Museum in Hoxton is a free museum about the changes in our homes through the ages.
