

# HOW ROCKS FORM

## IGNEOUS

BY AMBER AND  
OLIVE

FIRST THE MELTED  
MAGMA PUSHES TO  
FORM A VOLCANO.

THEN IT EXPLODES  
AND RUNS DOWN  
THE SIDE AND TURNS  
INTO BASALT.

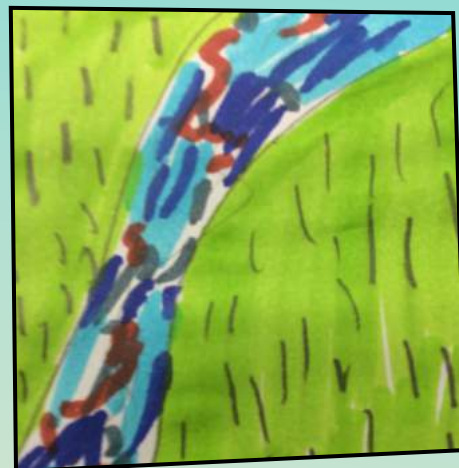

BUT THERE'S STILL  
SOME THAT COOLED  
DOWN INSIDE IT IS  
CALLED GRANIT.

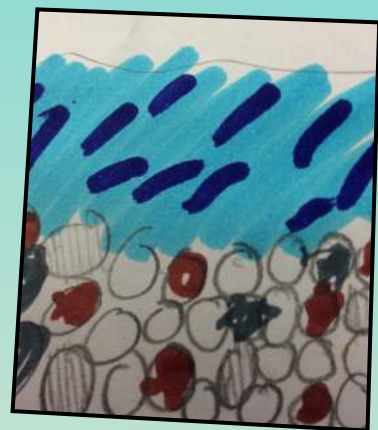

## SEDIMENTARY ROCKS

FIRST IT STARTS OF  
AS A MOUNTAIN AND  
WEATHER  
CRUMBLES THE  
MOUNTAIN AND  
BOULDERS FALL.

THEN IT FALLS INTO  
A RIVER ON TOP OF  
EACH OTHER.

THE PRESSURE IS  
SO HARD IT FORMS  
INTO SEDIMENTARY  
ROCK.

# METAMORPHIC

THE EARTHS PLATES  
MOVE RAPIDLY TO  
MAKE EARTH
