

Year 4 Home Learning

Wider

Curriculum

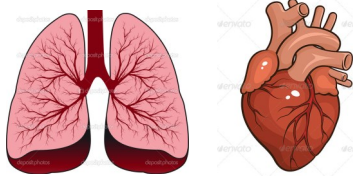

Science - 'Animals including humans'. Within this topic, the children will be finding out about the digestive system, the names and functions of different types of teeth, and also learning about producers, predators and prey.

Geography - 'Populations'.

Proper Project

Human Body

Your body is an incredible piece of equipment and each part has a different function. Some very specific functions, such as breathing, are performed by the organs in your body. Choose one of the following organs - lungs, heart, brain, liver, skin - and find out what function it performs, how it works, and the ways that we can improve or damage it through lifestyle choices. You can present your findings in a variety of ways, such as a PowerPoint, model or poster, but remember to make it interesting for your audience.

Where in the World?

Populations We have been learning about migration. This is when someone moves to live in another place. London is a place that lots of people migrate to from all over the UK and the world. We want you to think about the histories of your own families. If you look back, you will find that somebody moved to London at some point to live! Think about the following questions: Where did they move from? Why did they move? What might it have been like for them to move? Bring in a photo or make a presentation to tell us all about them!

Roman Army

The Roman army was an incredibly organised and effective fighting force. They had amazing equipment - especially their shields. We would like you to design and make a Roman shield. We recommend using a yoghurt pot (for the bump in the middle), card and foil to make a life-sized shield. But you could design your shield on paper or a computer. Bona fortuna (good luck)!

Let's talk...

Imagine you have to travel back and live for a week in the Roman times. You are allowed to take three items from modern day life. What would you take and why?
